rods

KATIMEX[®]

Push Rods

The new push rod system by KATIMEX -
push by push - for your solution

fast - handy - ideal

The new push rods are an appropriate tool for all kind of problems!
KATIMEX makes approved tools even better.

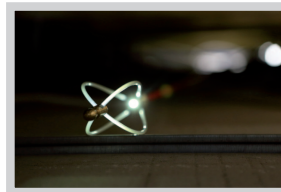

Katimex push rods are made of synthetic reinforced glass fibre and are an essential tool for easy and quick cable installation - especially where no cable shafts, cable ducts or other conduits are available.

The innovative gliding support tool makes it easy to overcome most barriers and lights the working area perfectly. The robust and handy bag offers a maximum of comfort and is very user-friendly. It can be fixed on every ladder - so your push rods are always within reach.

Two different rod diameters ensure a wide range of usage. Cable and ropes can be pulled or pushed.

The abrasion-resistant synthetic coat make the push rods very rugged, so the fibre glass core is protected and can not be damaged while using.
